Seleccionar Cloud to on-premise:

Agregar el mapeo al sistema virtual:

Cloud To On-Premise

Add System Mapping

 Select back-end type of on-premise system

Back-end Type:

[Previous](#) [Next](#) [Cancel](#)

Add System Mapping

 Select protocol for communication with on-premise system

Protocol:

[Previous](#) [Next](#) [Cancel](#)

Add System Mapping

 Enter internal (on-premise) host and port

Internal Host: *

Internal Port: *

[Previous](#) [Next](#) [Cancel](#)

vhzeads4ci.sap.zeusol.com.pe:44300

Add System Mapping

 It is recommended to use a virtual (cloud-side) name that is different from internal name

Virtual Host:*

Virtual Port:*

[Previous](#) [Next](#) [Cancel](#)

Add System Mapping

 Select principal type

Principal Type:

[Previous](#) [Next](#) [Cancel](#)

Add System Mapping

 Select host for request header field HOST

Host In Request Header:

[Previous](#) [Next](#) [Cancel](#)

Add System Mapping

i Summary

Protocol: HTTPS (None)

Internal: vhzeads4ci.sap.zeusol.com.pe:44300

Virtual: zeus.dev:44300

Check Internal Host: ☐
